## Alaska Land Grab

Has the federal government forgotten why Alaska was granted statehood? Is there an agenda to make Alaska one giant wildlife refuge? That and other targeted questions are posed during Dan Fagan's "Alaska Under Siege," an in-depth look at current unprecedented power grab efforts by the federal government.

From the Environmental Protection Agency's draft Bristol Bay Watershed Assessment related to development of the Pebble Deposit, located on state land, to U.S. Secretary Salazar's National Petroleum Reserve Alaska proposal, which places roughly half of the area off limits to drilling, the economic ramifications of these and other actions to Alaska's economic wellbeing is chilling.

Alaska is home to more public lands, including national forests, national parks and national wildlife refuges, than any other state in the country. In fact more than 60 percent of the state, or 222 million acres, is managed by federal agencies. Put into perspective, federal lands in Alaska alone make up one third of all federal lands in the United States - larger than the entire state of Texas, bigger than the combination of 15 eastern states stretching from Maine to South Carolina, and larger than Oregon, Washington and California combined.

"Alaska Under Siege ," airs Wednesday, Oct. 24, 2013, 7 p.m., KTBX Fox 4 TV, immediately following game 1 of the World Series.

## U.S. Has Means to Lessen Dependency on Mineral Imports

Roughly 15 percent of available global mineral resources can be found on American soil, yet currently, the United States contributes littler more than 1 percent of the global supply.

Without smarter policies and a dependable regulatory system related to the responsible development of U.S. resources, America will continue to rely heavily on other countries. Read The Hill's Congress Blog...
